For technical information check page 14/15

The Porty has two connection sockets with either symmetrical or asymmetrical power distribution; distribution ratios available: 1:1, 2:1 or 3:1. Asymmetrical distribution is ensured by an automatic capacity management system which provides further essential benefits. In comparison to packs relying on voltage regulation only, the Porty Premium AS/RC offers significantly better colour temperature characteristics and considerably shorter flash durations, particularly at low power. Both are invaluable benefits for high-speed action and digital photography. The new Premium combines all this with record-breaking recycle times: only 2.7 s from 0 to full power! At reduced power, recycle times can be as low as 0.5 s. The built-in radio remote control provides reliable triggering in all conditions. Plus, it allows you to adjust flash power and control the modeling light. The receiver electronics is fully integrated. The transmitter can be connected via cable or direct X contact. At a synchronisation voltage of only 3 V, the unit is ideally suited for all digital cameras. The user has the choice between several channels, with a working range of over 25 m (82 ft.).

## THE PORTY PREMIUM 1200 AS/RC

### AUTOMATIC CAPACITY MANAGEMENT

### THE NEW RADIO CONTROLLED ASYMMETRICAL

The shortest sync time is 1/250 s. The radio triggering system is identical to the one used in the INTEGRA PRO Plus, allowing your units to share a single transmitter. Flash power can be adjusted via touch buttons (+/-) or remote control in a range of 6 (!) f-stops in precise 1/10 f-stop increments. The unit uses APD for power reduction – what else! The light-emitting front panel is extremely wear-resistant and its “real” buttons provide tactile feedback.

## PORTY PREMIUM KIT

- Code No. 7024953**  
**Porty Premium Kit 1200 AS / RC**  
 Kit includes:  
 1 x Porty Premium 1200 AS/RC (4953)  
 1 x EH PRO 1200 Head (3602)  
 1 x Modeling lamp 50 W Halogen (185)  
 1 x Radio flash trigger and power control transmitter RC/RF-T (390)  
 1 x Battery charger "Premium" (5671)  
 1 x Additional battery drawer (1497)  
 1 x Umbrella flood reflector (87)  
 1 x Ultra softbox 45 x 65 cm (4601) - for free!  
 1 x Alu stand III (200)  
 1 x Softbag IV (4200) with handle and wheels

A single battery pack provides power for over 5,000 flashes at low power or approx. 250 flashes at full power. The unit comes in a compact metal housing with the quickest battery exchange system on the market (approx. 3 s)! The redesigned quick charger is specifically adapted to the powerful Porty batteries without memory effect and brings an empty battery to full capacity in only 2.5 hours. The unit's LED-equipped photocell can be switched off. All in all, you have up to 100 W of modeling light power at your fingertips. The modelling light is controlled by either a push button on the unit or via a Porty Flash Head. The optional automatic switch-off can be set from 2 to 60 min. The 10 years since the launch of the Porty line have seen the introduction of a vast range of accessories including flash heads, the Starspot 1500 P, a ring flash and many more. All accessories are compatible across the entire range and can be used with compact flash units as well as with EH PRO Flash Heads.
